

Optimize Course Schedules with

# EduNav Insights

## Accurately Model Seat Demand with Your Real Data

Many of your students aren't on track to graduate on time, because your institution doesn't have the data it needs to know you're offering the right courses at the right time in the right capacity.

With **EduNav Insights**, you'll tap into your actual enrollment data to more accurately model seat demand. Rather than forecasting with predictive data, you'll know exactly how to use your campus physical spaces and faculty time to make the most out of each semester's schedule, for students and for your institution.

Insights provides your institutional leadership with answers to scheduling questions like:

- How many students have each class in their plan each term?
- Which courses have more demand than we can currently meet?
- How many students are off track? How far off track are they?
- How many students' graduation terms would be pushed out if we cancelled half of the classes that meet a given requirement?

“  
The tools we have used for years don't provide actionable insights like EduNav Insights does.
