

Streamline the Transfer Process with

Unified Digital Transcript

Automatically generate a single transcript in each institution's native notation, encompassing the student's entire higher education history – even without standard course numbering

Students are frustrated because transferring from one institution to another requires a long turn-around time and adds confusion to the already complex degree requirements. Institutions are exhausting their already limited resources manually articulating PDF transcripts, which introduces errors and delays, contributing to concerning attrition trends.

With **EduNav Unified Digital Transcript (UDT)**, you'll streamline the transfer process. For each student, UDT reads the student's academic records directly from all participating institutions' student information systems and uses articulation information between these institutions to harmonize the data.

UDT benefits all stakeholders – students, staff, institutional leadership, and states – by:

- Improving the efficiency around producing comprehensive transcripts, offering 24/7 availability of up-to-date transcripts and reducing turn-around times for prospective transfer students.
- Improving the quality of transcripts by eliminating mistakes that negatively impact student outcomes.
- Providing actionable analytics.
